# Visa Project

This project provides a comprehensive system for managing visa applications, including an API for retrieving visa details and corresponding PDF documents.

## Table of Contents

## Installation

1. **Extract the ZIP file** you received.
2. **Navigate to the project directory** in your terminal.
3. **Install dependencies** by running:

```
npm install
```

## Environment Variables

Create a `.env` file in the root directory of the project and add your MongoDB connection string:

```
MONGO_URI=your mongo db URI
```

Replace `<username>`, `<password>`, `<host>`, `<port>`, and `<database>` with your actual MongoDB credentials.

## PDF Storage Location

All visa PDF files should be stored in the following directory:

```
arduino
Copy code
public/Pdfs
```

Make sure to place your PDF files in this folder and ensure the paths in your database correspond to the saved PDFs.

## Usage

Once everything is set up, you can start the server using:

```
npm run dev
```

.
